DETAILED ACTION

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-7, 14, 15, and 17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by d'Auria (US 4001635). D'Auria teaches an reflective electrostatic actuator array having a plurality of electrostatic actuator cells 10 equal to the number of the product of the terminals of the addressing units 40 and 50. The first electrodes are connected to one of the terminals of the group but not the other terminals of the group, and the second electrodes are connected to a terminal in the second group but not the other terminals of the group. The actuator cells having both a moving 5 and stationary electrode 4 which are attracted to each other when a controller applies a voltage to specific addresses of the first and second terminals.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 10, 11, 16, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over d'Auria (US 4001635), in further view of Bosch et al. (Bosch)(US 5322258). D'Auria teaches every aspect of the invention except the electric current path in a magnetic field for generating a Lorentz force. Bosch teaches the use of both electrostatic and Lorentz forces in MEMS optical devices to provide a low power device. It would have been obvious to a person of ordinary skill in the art at the time of the

Art Unit: 2834

invention to construct the actuator of d'Auria with the conductors in a magnetic field to provide a low power actuator as taught by Bosch.

Allowable Subject Matter

7. Claims 2, 8, 9, 12, and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl I.E. Tamai whose telephone number is (571) 272 - 2036.
